REPLACEMENT OF THE FLOW SENSOR IN THE FLOW SENSOR ASSEMBLY

- **Subject:** Necessary information on how to replace the flow sensor in flow sensor board (API part number 00402).
- **Tools:** Philips head screwdriver, 25W soldering iron, solder removal tool, solder, <u>a pair of soldering tweezers</u>

Procedure:

- 1. Remove the flow sensor board from the unit. Be careful disconnecting the tubing from the flow sensor and the pressure sensor.
- 2. Desolder the flow sensor terminals.
- 3. Loosen the screws attaching the flow sensor to the board.
- 4. Carefully remove the flow sensor from the board. Make sure the solder pads are not damaged.
- 5. Install a new flow sensor into the board.
- 6. Install the screws attaching the flow sensor to the board. Please do it before soldering the terminals.
- 7. Solder the terminals.
- CAUTION: MAKE SURE YOU USE SOLDERING TWEEZERS AS A HEAT SINK. FAILURE TO DO IT WILL CAUSE THE DAMAGE TO THE FLOW SENSOR.
- 8. Clean the board, attach the tubing to the flow sensor and pressure sensor.
- 9. Install the board into the unit.
- **10.** Leak check the analyzer.
- 11. Turn the power on.
- 12. Check the voltage on TP3 flow sensor board for 10.23 ± 0.10 Vdc.
- 13. Check the front panel. If the front panel reading is slightly different from the measured flow, readjust R3 on the flow sensor board, to achieve correct flow reading.
