TROUBLESHOOTING TS1 AND TS2 TOUCHSCREEN ISSUES

I. <u>PURPOSE</u>:

To provide guidance on identifying the source of a touchscreen issue for a TS1 or TS2 display.

II. <u>TOOLS:</u>

USB Mouse

III. PARTS:

None

IV. **PROCEDURE:**

- 1. Plug in a USB mouse to either of the front panel peripheral ports and see if a cursor appears that allows you to control the instrument. If there is no mouse cursor, move to step 2. If there is a mouse cursor, move to step 4.
- 2. Lower the front panel and locate the interface PCA behind the display. See figure 1 for a picture of a TS1 interface PCA with touchscreen controller daughter board.
- 3. Check DS2 from **figure 1 part C** to see if this is lit or not. If not, re-seat the micro USB connection at J9 from **figure 1 part B** at the interface PCA, and also at the CPU being careful not to pull on the wires directly. If there is still no light, change the interface PCA.
- 4. If you plug in a USB mouse and get a cursor, see **figure 1 part A** for the TS1 touchscreen controller. If your interface PCA has this daughter board installed, then you have a TS1 display, and this daughter board itself has failed. If you do not have the daughter board on your interface PCA, then you have a TS2 display, and the display itself has failed.
