

ECMPS Reengineering Effort

Kevin Batchelder

Lead Software Developer

September 14, 2021

Overview

- EPA effort to redesign ECMPS
- Eliminate Client Tool desktop application
- Convert Client Tool to browser-based application
- Why?
 - Half of calls to CAMD are for technical support unrelated to regulatory concerns (Client Tool installation; local shared database management; etc.)
 - CAMD productivity and budget

ECMPS Changes

- Change file format from XML to JSON
 - EPA says no new data elements required
- Cisco will update Breeze75
- Internet access required to use browser-based Client Tool
 - “Offline” use not possible
 - Current Client Tool requires internet access to submit

Questions / Concerns

- Some users have expressed concern over potential EPA access to pre-submittal data (vs. current desktop app)
 - Significant issue?
- Can multiple users import / view / edit the same pre-submittal data?
(Similar to current shared databases)
- Transition plan – multiple quarters or all at once?

Timeline & Updates

- Possible date – 2023?
- Timeline update next week
