What is Cylinder Manager?

- Cylinder Manager Utility is a tool for tracking gas cylinders and the calibration tests they are being used for from the time they arrive at the CEMS shelter until retirement back to the gas cylinder company.
- Keep track of spare, in use, and retired cylinders
- Simple functionality to change when a cylinder is spare, in use or retired and properly associate them with calibration tests

Cylinder Manager Work Flow

- Create Spare Cylinder
 - Using a cylinder sheet you can manually enter the data into a form to create a new spare cylinder.
 - (NEW) With a scanner tool you can now scan the QR code on the cylinder sheet to auto fill the form with the cylinder data.
- Assign Cylinder
 - Drag and drop a spare cylinder onto an in-use cylinder to replace its associated calibration tests.
 - Drag and drop a spare cylinder onto a gas profile to use that cylinder for the calibration tests associated with that gas profile.
- Retire Cylinder

DEMO

The Cisco logo is located in the bottom right corner of the slide. It consists of the word "CISCO" in a stylized, blue, sans-serif font. The letters are slightly overlapping and have a subtle gradient.
